

Net808Source's work in EMR Development/customization

EMR using ASP.net:

We have developed EMR application for gastroenterologists in USA. This is developed using ASP.net. We are also maintaining this application. It includes past medical History, Family History, Social History, Surgical History, Lab Results as well as current medical issues. We are working on to upgrade current EMR application to make it HIPAA compliant and CCHIT Certified. We have also customized or integrated other EMR applications like ClearHealth for Clients in USA.

(Please see the screen shots)

EMR developed using "Oracle Apex":

We also developed an EMR using "Oracle Apex". The general list of modules is as mentioned below.

- 1) Immunization HL7 creation
- 2) CCR file creation
- 3) LONG_NOTE insertion for long data
- 4) Patient Portal - a different application for patient
- 5) Display uploaded images
- 6) Printing
- 7) Invoice Printing page
- 8) PQRI Points
- 9) Patient Education

10) CCR Processing for EMR

11) Scheduling

12) Mailing

13) Digitalisation of xray etc. : These can be viewed using PAC viewer

EMR developed using "Open EMR" :

The main tasks we did are as below.

Patient Registration: demographics, vital statistics, contact information and insurance coverage

Patient History and Physical

Managing users of various levels for the application.

Menu changes and design changes for Open EMR custom application as per client requirement

Added custom Template functionality for SOAP_notes page

Action plan template functionality

working on the billing functionality for the paypal and credit card integration

Pre-visit and post visit table
